TIGER INSTITUTE
HEALTH ALLIANCE

Connecting Missouri For A Healthier Tomorrow

The Tiger Institute Health Alliance, a division of the Tiger Institute for Health Innovation, is a coalition of health care organizations dedicated to improving the efficiency and quality of care delivery, while positively impacting the health of their communities and beyond.

The major goals of member partnership include:

- Provide access to new health innovations and advanced health information technology
- Provide opportunities for collaboration with forward-thinking peers who are also working toward a healthier Missouri

We can create a healthier Missouri by providing health care organizations with the technology needed to more efficiently coordinate care when and where it is needed, empowering providers with the tools to engage in and manage their patients' health, and creating outstanding health care experiences for all.

Connecting Missouri

To improve the health care of Missourians, we established a platform for the transfer and sharing of health related information. The strength of these connections is the ability to share data that is typically stored in multiple organizations, while maintaining the context and integrity of the information being exchanged.

The Health Information Exchange provides access to and retrieval of patient information to authorized users, facilitating safe, efficient, effective, and timely patient care.

Benefits of Partnering with Us

Our members share more than just information. They are part of a team created to bring the very best from each of their experiences and organizations, to share best practices, collaborate on local policies, and develop innovative tools that meet their needs.

Benefits of our solutions and membership include:

- Access to information
- Unified view of patient information
- Cost savings
- Patient privacy and security
- Member collaboration and influence
- Innovations and flexible solutions to meet your local needs
- Access to health information outside your region

Our Solutions

We offer our members a computing architecture that powers the electronic flow and use of health information across organizations and communities.

The technology scales to meet the objectives of provider organizations, ranging from health systems, to single physician practices, to post-acute care facilities, to health information exchanges. Members are able to securely exchange patient information with almost any other health information system – no matter what electronic health records (EHRs) are in use.

Members choose from a menu of connectivity services based on what makes the most sense for their organizational needs. Our services include Hub Services, Direct Messaging (which follows Direct Project standards), and Health Information Exchange (HIE). Our client team will work with you to identify your collaboration needs and the solutions that will work best for you and your organization.

Send

Hub Services enable the flow of clinical data from hospitals to physician practice settings, labs, pharmacies, and immunization registries, regardless of the EHR system or systems in use.

Collaborate

Direct Messaging provides an encrypted communication channel for health care providers and patients, similar to email, but always secure.

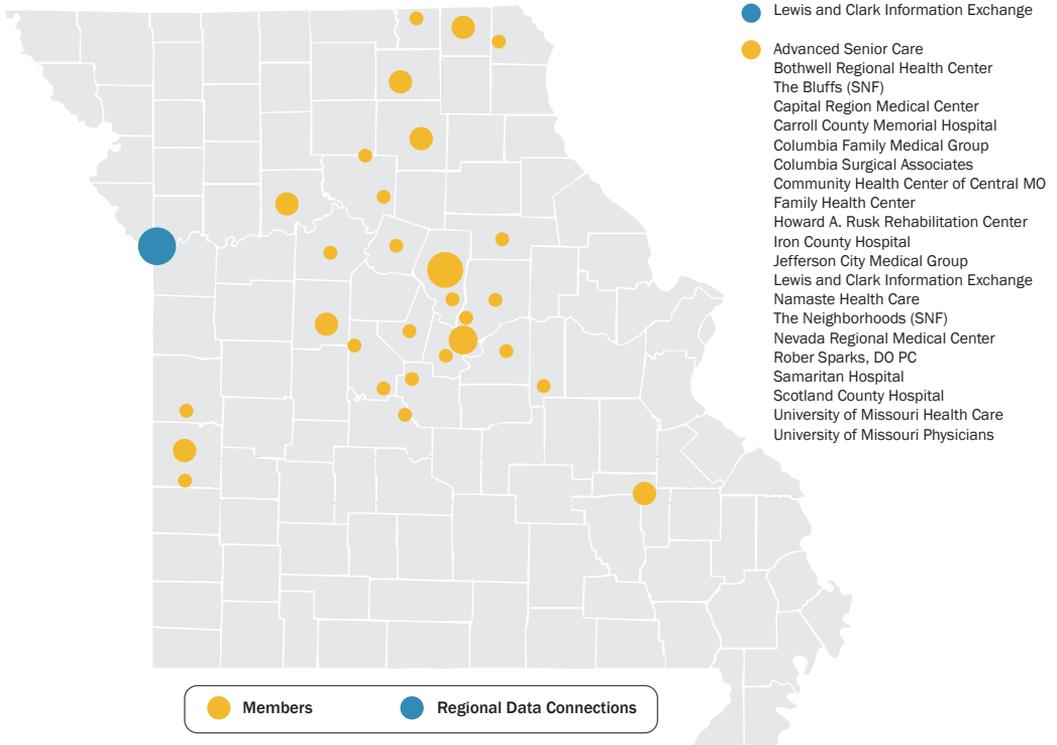

Discover

The Health Information Exchange is our solution for creating the longitudinal record. It allows users to query information and view all the medical care delivered to their patients. Information displays in the user's EHR, ensuring no disruption to workflow. And if an EHR isn't in use, the HIE is accessed via web portal.

Our HIE Network
